DETAILED ACTION
EXAMINER'S AMENDMENT

The application has been amended as follows:

In claim 14, line 1, replace "13" with -12--.

37 CFR 1.126. Numbering of claims.

The original numbering of the claims must be preserved throughout the prosecution. When claims are canceled the remaining claims must not be renumbered. When claims are added, they must be numbered by the applicant consecutively beginning with the number next following the highest numbered claim previously presented (whether entered or not). When the application is ready for allowance, the examiner, if necessary, will renumber the claims consecutively in the order in which they appear or in such order as may have been requested by applicant.

Allowable Subject Matter

Claims 1, 2, 6, 7, 9-12, 14, 15, 16, 18, 21-28 and 30 are allowed.

The following is an examiner's statement of reasons for allowance:

Upon further consideration and based on Applicant's remarks, filed on 4/9/09, the examiner agrees with Applicant's reasoning that one of ordinary skill in the art would understand and be able to program a controller for telemetry communications.

The method and apparatus for inductively communicating data with an implantable device comprising first and second battery voltage or potential sources in circuit configurations as claimed are not taught nor suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Barreras (US 5,769,877) discloses an inductor coil for gathering emf power transmissions. A separate replenishing apparatus comprises a battery power supply. An alternating voltage generating means is coupled to the power supply and the transmitting inductor coil is coupled to an alternating voltage generating means. The replenishing apparatus is position able adjacent the implanted device for supplying emf power transmissions to the receiving inductor coil.

Baumann et al (US 5,279,292) disclose a rechargeable battery which functions as a direct voltage source. In addition, a receiving series-resonant circuit functions as a constant current source for the direct voltage source. A percutaneous means is provided for inductive and mechanical coupling of a transmitting coil for the transmitting series-resonant circuit.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George Manuel whose telephone number is (571) 272-4952.
